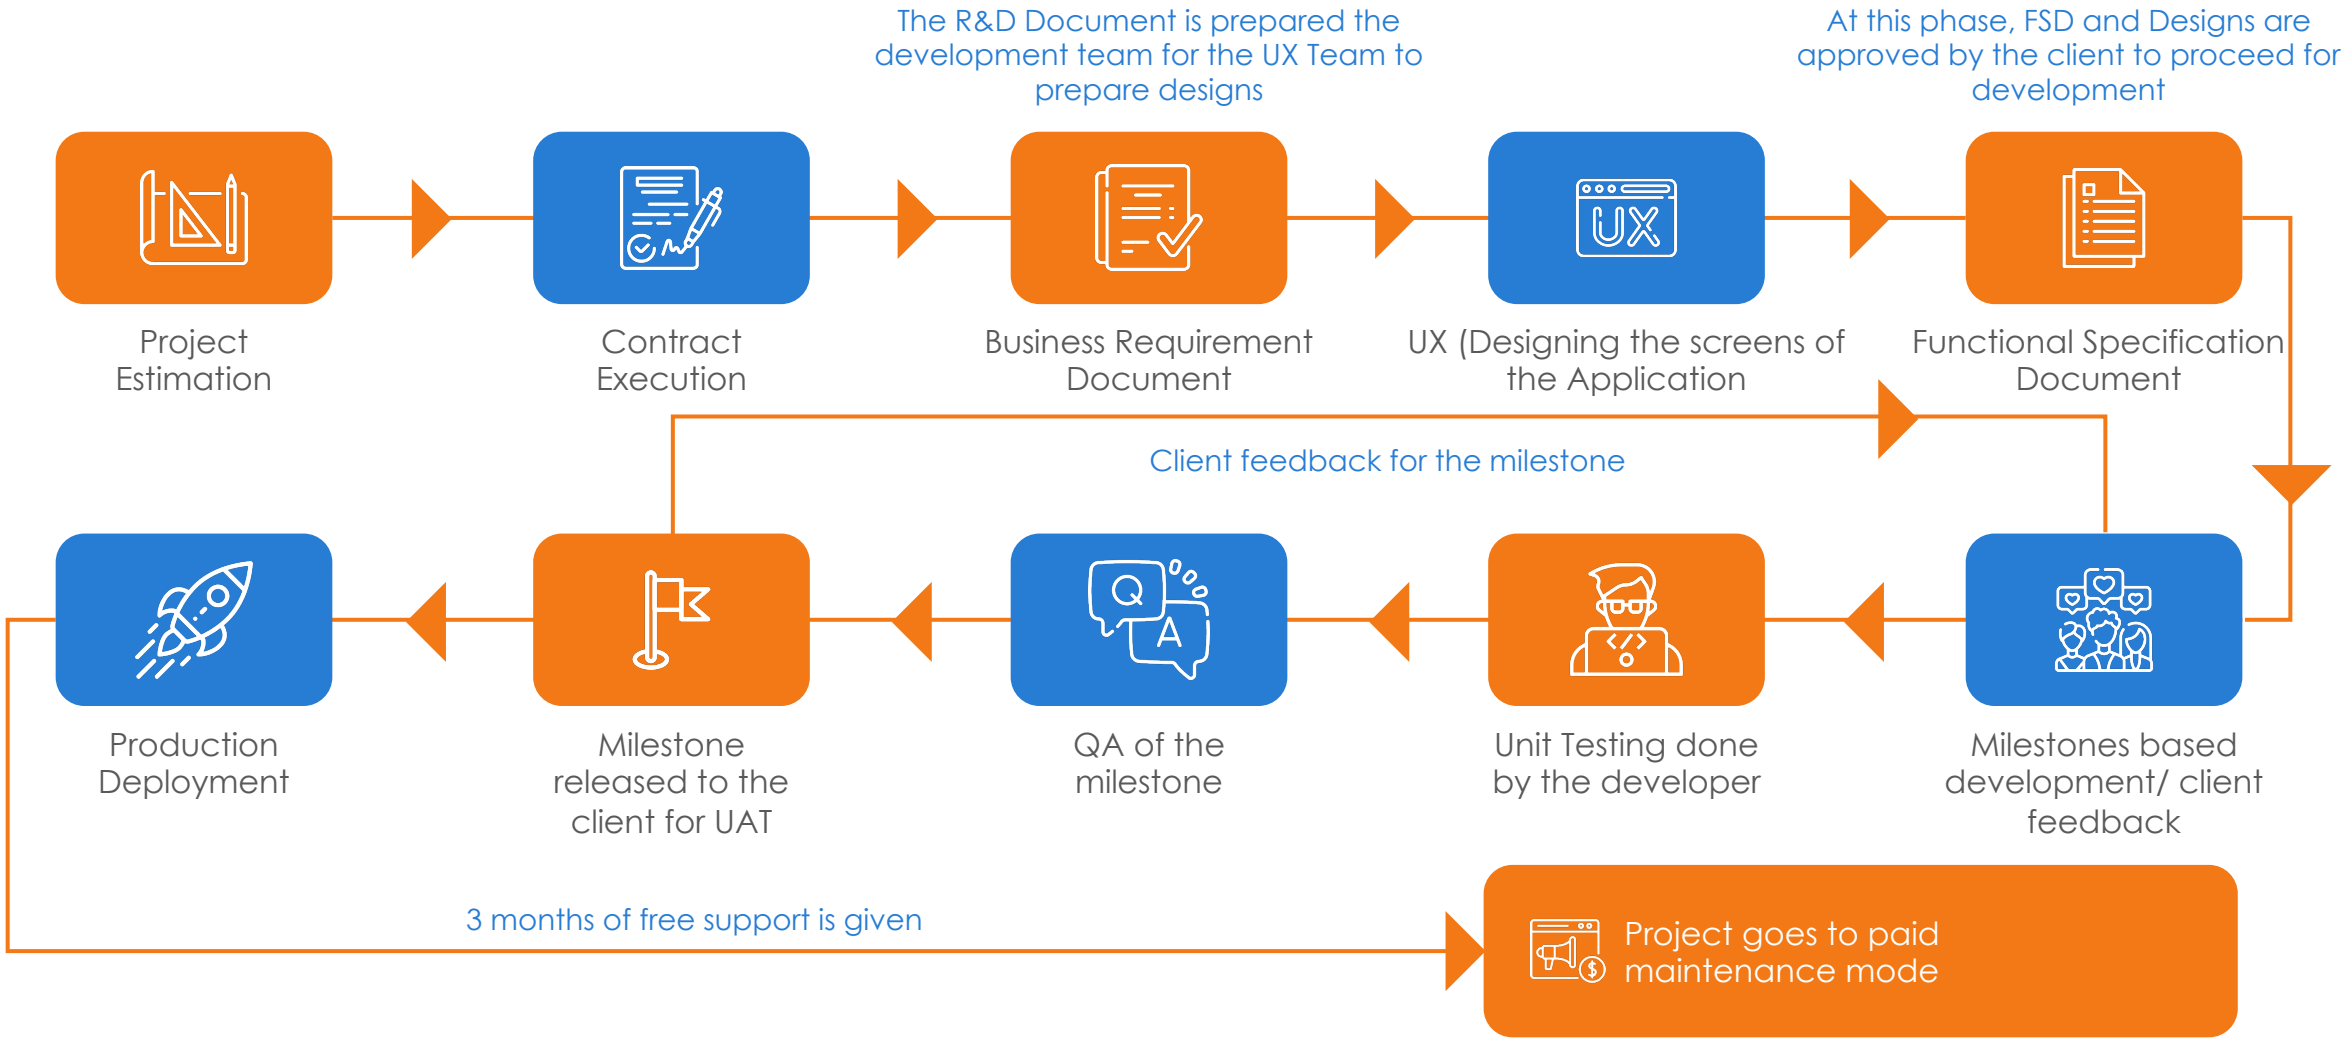
EdTech

Online Retail

OUR PROCESS FOR CUSTOM SOFTWARE DEVELOPMENT



CASE STUDIES

A Canadian Merchandising Company

CHALLENGES

The company's current setup on Dedicated servers at OVH which consisted of almost 4-5 dedicated boxes based on Windows and one OpenVpn server based on Linux VPS at OVH. So the infrastructure level challenges are:

- ✓ Out of place quick disaster recovery competencies.
- ✓ Potential hard drive failures leading to data loss.
- ✓ High recovery time for an SQL database system.
- ✓ Current setup is not easily scalable on dedicated boxes.
- ✓ Manual application deployments.

SOLUTIONS

After analysis of the current setup at OVH data centre we assessed the current state of the company. We created an optimised roadmap which improves the overall stability and scalability of the infrastructure. The transformation added confidence on current application setup and they were able to scale quickly.

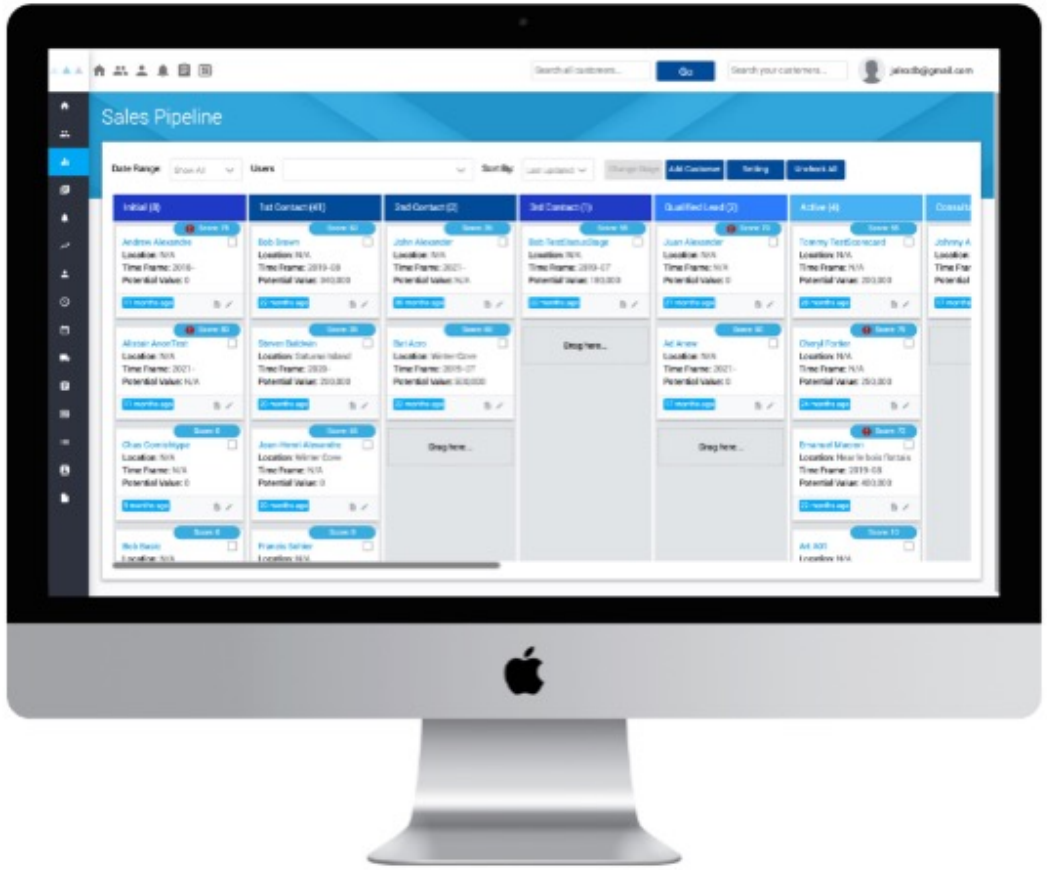
CASE STUDIES

Linwood Homes - CRM Service Provider

CHALLENGES

The company offer services related to a custom home building including custom home design, prefab homes, packages, and kits.

The platform was 20 years old and the company wanted to upgrade it to a new technology.



SOLUTIONS

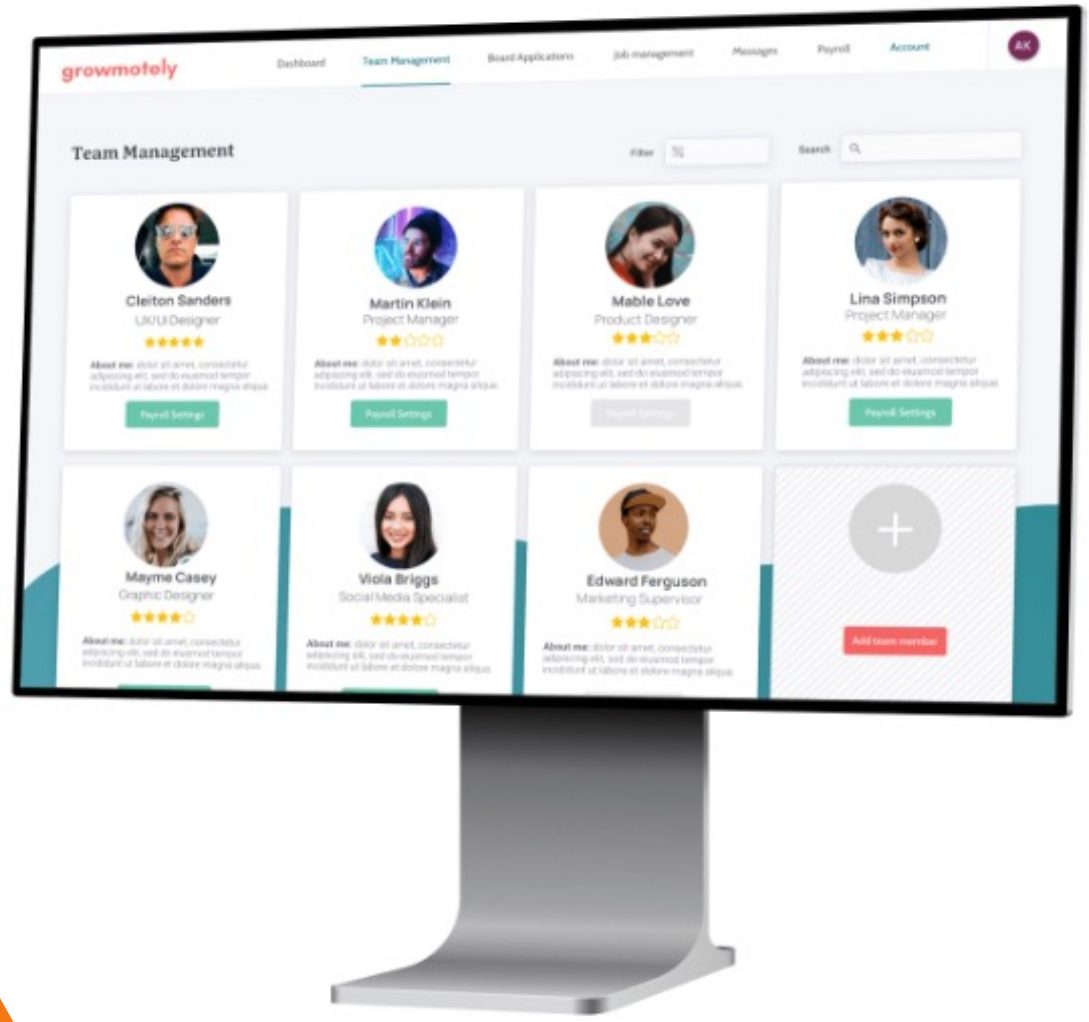
The team analysed the existing system and developed a web application and web-based admin panel to manage package quotation, customer qualification, order tracking, purchase agreements, dealer tracking, drafting schedules, production schedules and shipping schedules. The new platform scaled up the functionality of the over platform and providing better support to its customers.

CASE STUDIES

Growmotely - Talent Sourcing and Management Firm

CHALLENGES

Growmotely is a full-service talent sourcing and management firm, placing remote professionals into permanent positions. They manage sourcing, placement, contracts, payroll, performance management, and engagement for their clients and remote talent.
The company was facing multiple issues on the overall business support systems which required a significant upgradation.



SOLUTIONS

The team studied the entire business process and developed following solutions.

- ✓ A user-facing web application and a web-based Admin Panel for Growmotely's internal use.
- ✓ Front-end users are potential employees and hiring companies; the system is used to match candidates to job opportunities, negotiate wages and manage job scheduling.
- ✓ The Admin Panel allows Gromotely to manage all users and collect a commission on all wages and payouts processed through the application.

CASE STUDIES

LyfeMD Inc. - Health and Wellness Company

CHALLENGES

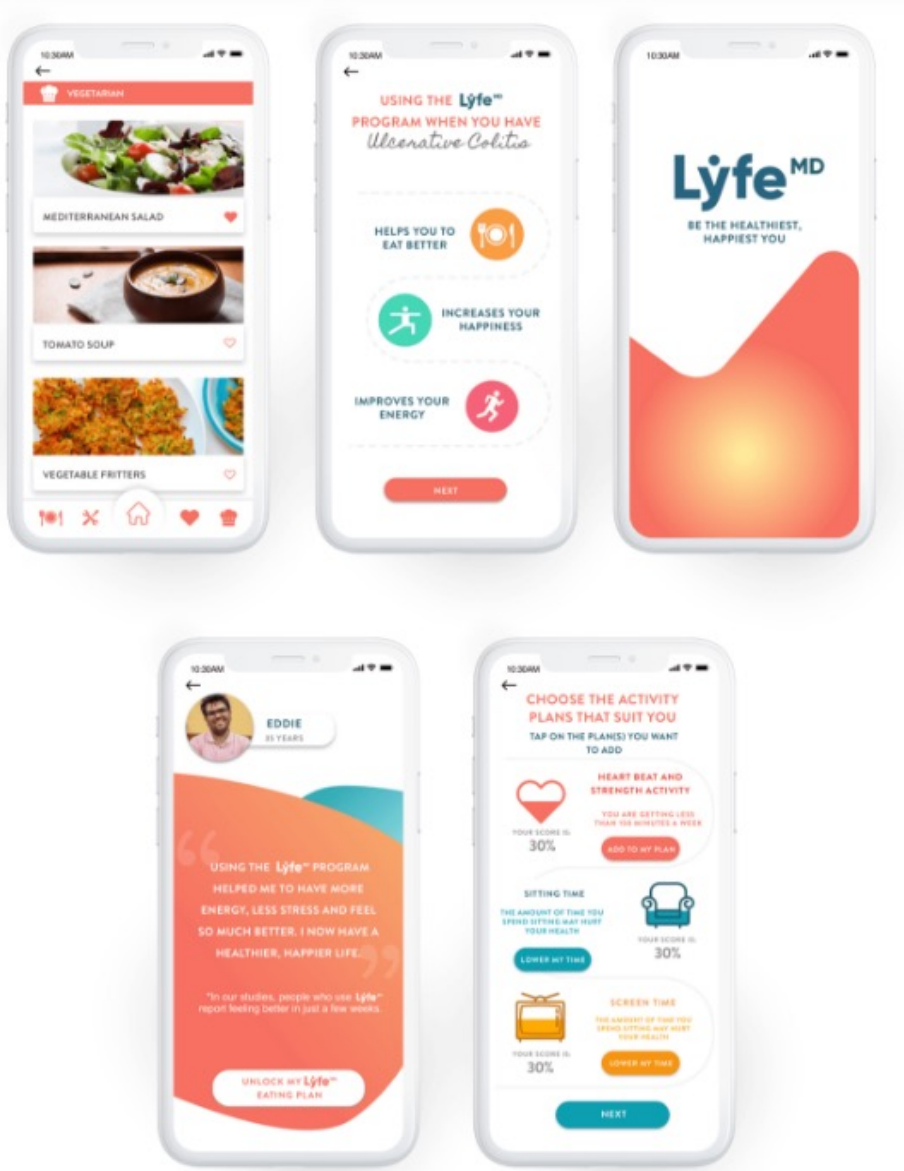
The company helps people live their happiest lives by providing simple and convenient complementary and alternative nutrition and lifestyle solutions to manage digestive diseases.
The company wanted to upgrade the platform and launched mobile application in order to capture more users.

SOLUTIONS

The team studied the entire business process and developed following solutions.

An admin planel where users and other app officials can manage the data, access and content creation

Native application for both iOS and Android devices.



CASE STUDIES

Lifeguard - Digital Safe-Consumption Product

CHALLENGES

The Lifeguard goal to build a mobile app was to build a digital safe-consumption product designed to save lives. Developed in partnership with British Columbia Emergency Health Services (BCHES), the application's goal was to allow people who use drugs to protect themselves from overdose by enabling direct access to emergency services. It needed to be accessible to all potential Users' devices, be extremely simple to operate, and always work.

SOLUTIONS

The team developed a very modern and easy-to-use interface that helps drug users to reach potential life-saving support when in need. Built as a native iOS application and native Android application allows for the vast majority of device types to access.

A plan to integrate directly with BC Ambulance services without having to adjust their current process was developed by Essential Designs, using direct phone carrier integration for Voice to Text conversion, and GPS coordinate relaying.
