Advisory**

QuantumSmart

Keeping Companies Safe, Secure & Prepared

We are here to right-size solutions to your unique business needs

A Current State and Target State roadmap will provide your organization with a holistic view of your technology landscape.

Our Process

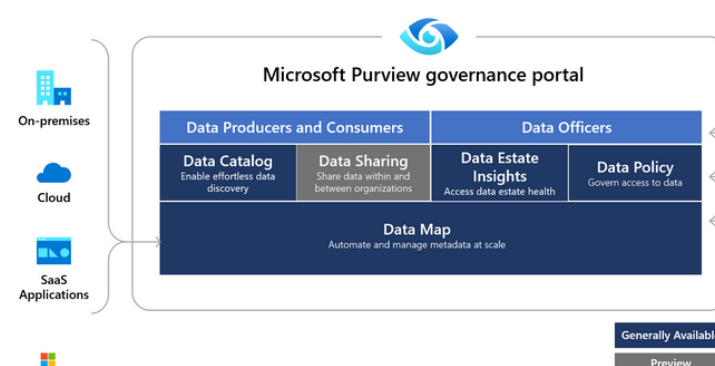

We improve cybersecurity defenses

Enable multi-factor authentication (MFA): MFA requires users to provide additional authentication factors beyond a password, such as a one-time code or biometric authentication.

Use Microsoft Defender for Endpoint: Uses artificial intelligence and machine learning to detect and respond to advanced threats. It provides real-time protection against viruses, malware, and other forms of malicious activity on your devices.

Use Microsoft Purview: A fully managed, unified data governance service that helps you manage and govern your on-premises, multi-cloud, and SaaS data. Purview creates a holistic, up-to-date map of your data landscape with automated data discovery, sensitive data classification, and end-to-end data lineage.

QuantumSmart

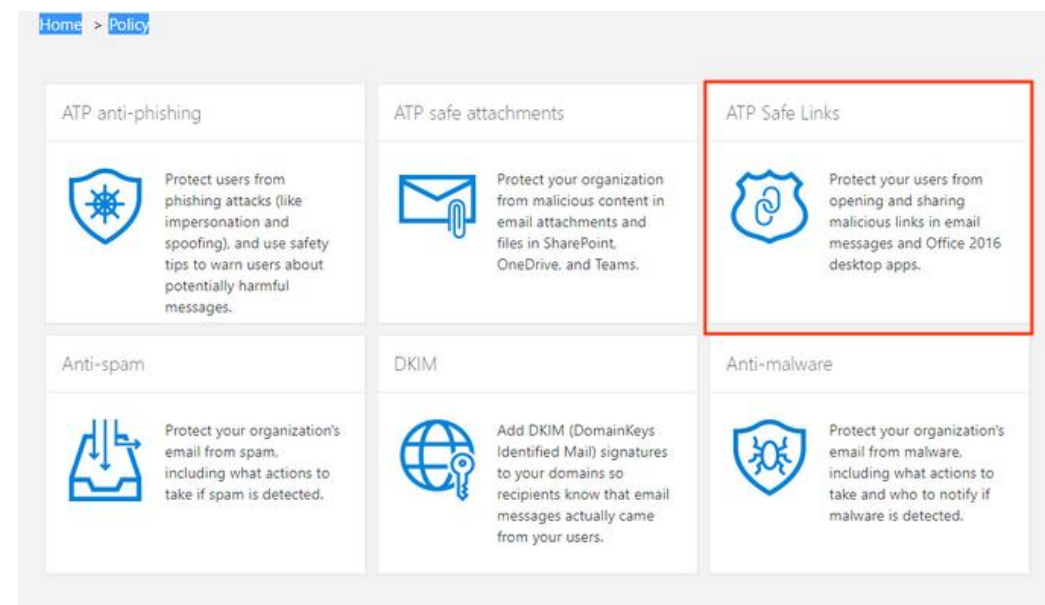

Keeping Companies Safe, Secure & Prepared

We enhance cybersecurity posture

Manage device access:

You can manage and secure devices that access your organization's data, whether they are owned by the organization or by employees.

Manage email security:

MS 365 has several categories of email security policies that are available by default.

Implement data loss

prevention (DLP) policies:

Helps prevent sensitive data from being leaked outside of your organization.

We are partnering to deliver solutions

What our clients say

"QuantumSmart's practical recommendations and how easily we can turn their advice into action impressed us."

"We highly recommend QuantumSmart as a transformative cybersecurity leader."

"They are a partner in this journey, not just a contractor."
